

Global Open Source Electronic Health Records March 21st 2026 at St Edmund Hall, Oxford

An international summit meeting, bringing together academics, healthcare professionals, engineers, business leaders and donors.

The Global Open Source Electronic Health Records initiative is creating a sustainable program for the deployment of open source Electronic Health Records (EHR) in lower-income countries, to deliver better healthcare and improve patient outcomes through:

- **Engagement** with locally-based Community Companies and Non Government Organisations to deliver the open source cityEHR health records system.
- An **Education Program**, developing the strategic and local IT skills needed to support EHR installations, for the long term.
- A **University Research Program**, with international collaborators, establishing needs and evaluating outcomes in participating countries.
- **In-A-Container** deployment of the infrastructure required for EHR in lower-income countries – sustainable, community-based, low-carbon and secure.

From Friday evening, arrive at St Edmund Hall, the oldest residency for the education of undergraduates anywhere in the world and the last surviving medieval academic hall at the University of Oxford. Enjoy a buffet dinner in the Wolfson Hall.

On Saturday, join the collaborating Universities, Non-Government Organizations and Community Companies, working together to deliver the GOSEHR vision of sustainable access to electronic health records, for the benefit of patients in lower-income countries. Case studies include implementations in Africa, Pakistan and Ukraine, with demonstrations and poster presentations.

On Saturday evening enjoy a gala dinner at the University of Oxford Examination Schools – the main centre for organisation and administration of the university examinations. Many of the final and other examinations for the University's students take place here, especially during Trinity Term. Designs for the building were prepared by Sir Thomas Jackson in 1876 and it was completed in 1882.
